

Protect Children Not Guns

The latest data from the U.S. Centers for Disease Control and Prevention show that 2,827 children and teens died from gunfire in the United States in 2003—one child or teen about every three hours, nearly eight every day, 54 children and teens every week.

- 1,822 were homicide victims
- 810 committed suicide
- 195 died in accidental or undetermined circumstances

- 2,502 were boys
- 325 were girls

- 1,554 were White
- 1,172 were Black
- 553 were Latino
- 51 were Asian or Pacific Islander
- 50 were American Indian or Alaska Native

- 378 were under age 15
- 119 were under age 10
- 56 were under age 5

In addition to this horrific child death toll, four to five times as many children and teens suffered non-fatal bullet wounds.

Children's Defense Fund 2006

Did You Know?

The number of children and teens killed by gun violence in 2003 alone exceeds the number of American fighting men and women killed in hostile action in Iraq from 2003 to April 2006.

In 2003, 56 preschoolers were killed by firearms. In the same year, 52 law enforcement officers were killed in the line of duty.

The number of children and teens in America killed by guns in 2003 would fill 113 public school classrooms of 25 students each.

More 10- to 19-year-olds die from gunshot wounds than from any other cause except motor vehicle accidents.

Almost 90 percent of the children and teens killed by firearms in 2003 were boys.

Black children and teens are more likely to be victims of firearm homicide. White children and teens are more likely to commit suicide.

The firearm death rate for Black males ages 15 to 19 is more than four times that of White males the same age.

A Black male has a 1 in 72 chance of being killed by a firearm before his 30th birthday. A White male has a 1 in 344 chance of being killed by a firearm before his 30th birthday.

In 2003, there were more than nine times as many suicides by guns among White children and teens as among Black children and teens.

Males ages 15 to 19 are more than eight times as likely as females that age to commit suicide with a firearm.

Although there has been a decline in child gun deaths since the peak year of 1994, children and teens are still twice as likely as adults to be victims of violent crime and are more likely to be killed by adults than by other children.

The rate of firearm deaths among children under age 15 is far higher in the United States than in 25 other industrialized countries *combined*.

Since 1979, gun violence has snuffed out the lives of 98,588 children and teens in America. Sixty percent of them were White; 37 percent were Black.

The number of Black children and teens killed by gunfire since 1979 is more than 10 times the number of Black citizens of all ages lynched in American history.

The number of children and teens killed by guns since 1979 would fill 3,943 public school classrooms of 25 students each.

Since 1993, when CDF launched its campaign to protect children against gun violence, the death rate of children and youth by gunfire has declined from almost 16 a day to just under eight a day. This is still a morally obscene statistic for the world's most powerful country, which has more resources to address its social ills than any other nation.

Additional tables on violence and firearms are available at www.childrensdefense.org.

What You Can Do to Keep Children and Teens Safer from Gun Violence

It is up to adults to protect children from firearms in our homes, schools, communities, and nation. We can:

1. Support Common Sense Gun Safety Measures.

The legislative record on gun safety is mixed but more bad than good. Congress continued to ignore the expiration of the 1994 Federal Assault Weapons Ban and also enacted a gun manufacturers' immunity bill that gives an unprecedented legal pass to the gun industry for liability in firearm injuries and deaths. The bill will take most lawsuits by victims of gun violence off the table. Thanks to the efforts of common sense gun safety advocates in the Senate, however, Congress passed a measure that requires child trigger locks with the sale of handguns. Now, Congress must enact legislation that closes the gun show loophole by requiring criminal background checks on those who purchase guns from unlicensed gun dealers.

Stay informed. Contact your elected officials to express your views on the need for gun measures to protect children. Call the White House at (202) 456-1414 or your members of Congress at (202) 224-3121. To learn how your members of Congress voted on this and other important issues, go to the *2005 CDF Action Council® Nonpartisan Congressional Scorecard* at <http://www.cdfactioncouncil.org/scorecard2005.pdf>.

2. Remove Guns from Your Home.

A November 2004 study in the *American Journal of Epidemiology* reported that, regardless of storage practice, type, or number of domestic firearms, the presence of guns increases the risk of homicide and suicide in the home.

The vast majority of firearms used in accidental shootings of children and teens come from the victim's home or the home of a relative or friend. A 2004 study published in the *Journal of the American Medical Association* concluded that state safe gun storage laws helped achieve an 8.3 percent decrease in suicide rates among youth ages 14 to 17 years.

3. Foster a Climate of Nonviolent Conflict Resolution in Your Home, Children's School, Congregation, and Community.

America is becoming a society where family violence is epidemic, child abuse and neglect are widespread, and children are being raised on TV programs crammed with scenes of brutality.

Concerned parents should organize nonviolent conflict resolution support groups in their congregations, schools and communities. Some excellent resources include: Dr. Deborah Prothrow-Stith's *Peace by Piece: A Guide for Preventing Community Violence*, based on the experiences of more than 40 exemplary programs across the country, and *Violence Prevention Curriculum for*

Adolescents. The Association for Conflict Resolution provides a comprehensive list of educational resources for conflict resolution at <http://acenet.org/resources/index.htm>. This list includes the CDF recommended curriculum, *Resolving Conflict Creatively*, created by Linda Lantieri, co-author of *Waging Peace in Our Schools*.

4. Monitor the Television Programs Your Children Watch and How They Use the Internet, and Don't Buy Them Violent Video Games.

Write to advertisers who sponsor violent television shows and sell violent electronic products to children. Talk to your children about the need to reject violence as a cultural and personal value. Protest and refuse to buy products that glamorize or make violence socially acceptable or fun.

5. Help Focus Public Attention on Child Gun Deaths.

Each year, encourage the reading of the names of children in your community killed by guns at your place of worship; publish their photos in your congregational bulletin. Urge local newspapers and radio and television stations to publish and broadcast photographs of children and teens killed in your community. Write a letter to the editor or an opinion column about the tragic loss of young lives to gun violence, and take other steps to raise awareness of violence against children.

6. Engage in Child WatchSM Visitation Programs.

Visit hospital trauma units and support the families who have lost children. Educate others about the human and financial costs of gun injuries. There are four to five nonfatal firearm injuries for every gun death of a child or teen. In addition to the enormous toll these injuries take on the lives of those affected, the annual health care costs are in the billions of dollars. A 2004 study in the *Journal of the American Medical Association* reported that gunshot injuries in the United States add up to \$2.3 billion a year in lifetime medical costs of which about half is borne by taxpayers.

7. Provide Children Positive Alternatives to the Streets So They Can Feel Safe and Protected.

Gangs, drugs, and gun dealers are available to children 24 hours a day, seven days a week. What positive competition for their attention is available in your community? Make your schools and places of worship venues of quality summer and after-school programs. Check CDF's Web site at <http://www.childrensdefense.org> for more information about CDF Freedom SchoolsSM reading and service model, which includes nonviolence training.

8. Organize a Ceasefire Initiative in Your Community. Gun violence is out of control in many American communities, particularly poor, urban neighborhoods. But some cities are addressing the problem by organizing programs modeled on Boston's successful Ceasefire initiative, which became known as "The Boston Miracle." Ceasefire brings families, faith groups, social service providers and the police together to halt the killing of teens by other teens. Boston's innovative and collaborative strategy resulted in a nearly 67 percent drop in youth homicides. At the heart of the Ceasefire approach is

the belief that we are all responsible for what happens in our communities and that young people, given the opportunity, will choose a path away from violence. But to do so, they must have resources and caring adult support. Ceasefire programs are operating in a dozen communities across the country. For more information about beginning a Ceasefire initiative in your community, contact David Kennedy, Director, Center for Crime Prevention and Control, John Jay College of Criminal Justice, dakennedy@jjay.cuny.edu or (212) 484-1323.

Gunshot Deaths: What Johns Hopkins University Hospital Trauma Surgeon Edward Cornwell Sees

The grim realities behind gunshot death statistics are even more depressing when seen from a front-line urban hospital trauma center. Dr. Edward Cornwell, Professor of Surgery and Chief of Adult Trauma at Johns Hopkins University Hospital in Baltimore, sees dozens of gunshot victims each year. In 2005, the hospital's Level 1 trauma center booked 88 deaths, mainly from penetrating wounds—gunshots or stabbings. Most of the victims were Black male teenagers. Sixty-one were dead on arrival (DOA).

Victims of gunshot wounds and stabbings between the ages of 15 and 24 make up 70 percent of the center's trauma patients. Since Dr. Cornwell came to Johns Hopkins in 1998, major steps have been taken to upgrade the trauma center with resources that would enable it to improve its record in saving the lives of gunshot victims. More lives have been saved among patients with blunt injuries from motor vehicle crashes and serious falls.

Yet, there have been no improvements in the number of lives saved among gunshot victims. In fact, according to Dr. Cornwell, while the number of assaults in Baltimore remains unchanged, the number of shooting deaths has gone up. "I've seen a disturbing increase in the number of deaths caused by a single gunshot at close range to the head or chest. What's most alarming," says Dr. Cornwell, "is the high volume among these instant fatalities of youths under the age of 21. In one week last year, on each of five consecutive nights, we saw a 20-year-old DOA. All of them were shot in the head or chest."

"I've seen a disturbing increase in the number of deaths caused by a single gunshot at close range to the head or chest."

About half of the victims who do not die from bullet wounds have head injuries so severe that they are brain dead. The few survivors often undergo multiple surgeries, followed by intensive care and long courses of physical therapy and medication.

Dr. Cornwell is unapologetically blunt about condemning what he sees as some of the major causes of Baltimore's gun violence. The easy availability of guns is high on the list. He also blames what he calls the city's "broken school system," noting that "60 percent of the Black men who go to jail are school dropouts. An overarching contributor to gun violence," he says, "is popular culture that condones underachievement and glamorizes brutality." Dr. Cornwell is angry as he describes the futility in stitching up a teenager with 15 stab wounds who had "Thug Life" tattooed on his forehead and "Kill or Be Killed" across his chest. "We saved his life, but he's going to be dead in five weeks or five months," he states. "This has got to stop because it's tearing at the fabric of our communities across the country."

States with the Most and Fewest Child Gun Deaths

The seven states with the most firearm deaths of children and teens in 2003:

California
Texas
Illinois
New York

Pennsylvania
Florida
North Carolina

These states accounted for 1,301, or 46 percent, of all firearm deaths among children and teens in 2003. There were more deaths than in 2002 in six of these states; Florida showed a decrease.

The seven states with the fewest firearm deaths of children and teens in 2003:

Hawaii
Vermont
New Hampshire
Rhode Island

North Dakota
Maine
South Dakota

These seven states accounted for only 41 firearm deaths of children and teens in 2003. Hawaii had the best record with only one youth firearm death.

WHAT DOES
IT TAKE FOR A
KID TO BUY A
\$50 HANDGUN?

ABOUT \$50.

And the underground market. And weak gun restrictions. And slack enforcement.
And greedy gun dealers. And, of course, a lack of support for gun control.
